                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of adenovirus death protein (ADP). Claimed replication-competent adenovirus (Ad) vectors comprise an Ad gene under transcriptional control of a CEA-TRE. The vectors can be used to detect and monitor samples for the presence of cells that allow a CEA-TRE to function, and to selectively kill such cells, especially malignant cells. Osciors containing an ADP gene (see AAV52966) may be more potent than vectors lacking the gene, making possible more effective treatment and/or lower dosage requirement
comprise at least one adenovirus gene, preferably a gene that contributes to cytotoxicity, under the transcriptional control of an AFP transcription regulatory element (see AAV47654-55). The vectors are useful for conferring selective cytotoxicity to AFP-expressing cells, especially cancer cells. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New adenovirus vectors, particularly for cancer therapy - comprising adenovirus gene under transcriptional control of carcinoembryonic antigen
                                                                                                                                        9

This is the amino acid sequence of adenovirus death protein (ADP). Claimed replication-competent adenovirus (Ad) vectors comprise an Ad gene under transcriptional control of a probasin transcriptional response element (PB-TRE, see AAV57334). The vector can be used for detecting cells that allow a PB-TRE to function, especially cells expressing an androgen receptor, such as prostate cells. They can be used to confer selective toxicity to such cells. In particular, the vectors con be used for treating cancers such as prostate cells. They can be used to confer ADP gene (see AAV57354) may render the vector more potent, making possible more effective treatment and/or a lower dosage requirement. An Ad vector has been constructed that contains the ADP gene under control of PB-TRE. Cytotoxicity was demonstrated toward LNCaP (prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 HTGSTIAPTIDYRNTTATGLTSALNLPQVHAFVNDWASLDWWWFSIALMFVCLIIMWLIC 60

The present sequence represents an adenoviral death protein, which is used to construct the vectors of the invention. The specification describes adenoviral vectors which comprise an adenovirus gene under transcriptional control of a cell status specific transcriptional regulatory element (TRE). The TRE is preferably one that is essential for adenovirus wectors may be used for the treatment of a range of tumours such as lung, stomach, breast, colon and rectum, and uterine and cervix cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MTGSTIAPTTDYRNTTATGLTSALNLPQVHAFVNDWASLDMWWFSIALMFVCLIIMWLIC 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This protein comprises the adenovirus death protein (ADP) of adenovirus serotype 2. The invention provides novel adenovirus vectors in which at least one adenovirus gene, preferably one that contributes to cytocoxicity, is placed under transcriptional control of a human glandular kallikrein hKLK2 enhancer transcriptional regulatory element (hKLK2-TRE, see AAX24755). Such vectors are useful for treatment of cancers auch as prostate cancer. The ADP gene may render the adenoviral vector more potent, making possible more effective treatment and/or lower dosage requirement. (Updated on 17-OCT-2003 to standardise OS field)

Human adenovirus type

WO200172994-A2

04-OCT-2001

human; gene therapy.

```
The invention relates to a recombinant vector (VI) which is replication-
competent in a neoplastic cell and which overexpresses an adenovirus
death protein (ADP). The vector can be used in a method for promoting
death of a neoplastic cell that comprises contacting the neoplastic cell
vith at least one VI; and a composition comprising VI and a second
recombination virus which is: (a) replication defective and which
expresses an anti-cancer gene product, where VI complements replication
of the second recombinant virus; or (b) replication-competent in a
neoplastic cell. VI, together with one or more replication-defective
adenovirus which expresses an anti-cancer gene product, are useful in
cancer therapy. Overexpression of ADP by VI results in faster lysis of
cells and spread of the virus throughout a cell monolayer than viruses
expressing wild-type levels of ADP. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant vector which is replication-competent in a neoplastic cell and overexpresses an adenovirus death protein, useful in cancer therapy when used together with replication-defective adenovirus which expresses

                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of the adenovirus death protein (ADP). The ADP gene coding region (see AAI70186) was obtained by PCR amplification and used in the construction of adenoviral vectors in which ADP expression was under the control of a urothelial cell-specific transcriptional regulatory element (TRE) derived from the human uroplakin II gene 5' flanking region (see AAI70144). This is an example of preferably an adenovirus gene, under transcriptional control of a urothelial cell-specific TRE. They display urothelial cell-specific cytotoxicity, and are used for the specific, targeted gene therapy of bladder cancer. (Updated on 11-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                                                                                                 This sequence represents adenoviral ADP. The ADP coding sequence may be used in the replication-competent adenoviral vector (A) of the invention which contains two genes (G1, G2) that are co-transcribed as a single mRNA and under control of a heterologous, target cell-specific transcriptional regulatory element (TRE). G2 has a mutation in, or deletion of, its endogenous promoter and is controlled from an internal ribosome entry site (IRES). The ADP coding sequence may be used as G1 or G2. (A) has greater specificity for a target cell than a similar vector in which TRE is operably linked to a gene and which lacks an IRES. (A) are used to modify the genotype of target cells, optionally in vitro with subsequent return of altered cells to the host and where G2 is a cytotoxic gene, to confer selective cytotoxicity to target cells, especially for killing cancer cells. On the displays a cytotoxic, cespecially for killing cancer cells. Abp displays a cytotoxic, or specific TRE ansures that (A) has better targeting specificity, with minimal replication in non-target cells, so a runaway infection is prevented but production of adenoviral proteins in target cells activates cand/or stimulates the immune response against target cells producing such proteins. The use of an IRES (rather than two identical control elements) eliminates the risk of homologous recombination and may provide enough a certification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to an adenovirus vector (AV) comprising an AV gene under transcriptional control of a cell type-specific transcriptional regulatory element (TRE) and optionally a first AV gene under control of a first cell type-specific TRE and a second gene under control of second cell type-specific TRE where the first and second cell type-specific TREs are substantially identical. When the vector is introduced into a cell (e.g. prostate cell, liver cell, breast cancer cell or colon cancer cell) it allows the cell type-specific TRE to function, resulting in cytotoxicity. The vector is useful for suppressing tumour growth of a target cell. This sequence represents a polypeptide used in the scope of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel adenovirus vector comprises adenovirus gene under transcriptional control of cell-type specific transcriptional response element for conferring selective toxicity on target cell and for suppressing tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MTGSTIAPTTDYRNTTATGLTSALNLPQVHAFVNDWASLDMWWFSIALMFVCLIIMWLIC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ð
                                                                                                                                                                                                                                                                                                                                                              adenovirus gene under transcriptional control of a cell type-specific transcriptional response element (TRE). Example TRES given in the specification include human prostate-specific antigen (ESA) TRE, human glandular kallikrein (hKLK) TRE, rat probastin (PB) TRE, human carcinoembryonic antigen (CEA) TRE, and human mucin-like glycoprotein DF3 (MUC1) TRE. The modified adenovirus vector is useful as a vehicle for introducing new genetic capability, particularly associated with cytotoxicity for treating neoplasia. For example, the vector may be used in a target cell to suppress tumour growth, or to kill the target cell. The vector is particularly useful in gene therapy. The present sequence represents adenovirus death protein (ADP). (Updated on 23-OCT-2003 to

This invention relates to a novel composition that contains a replication competent adenovirus capable of transfecting target host cells.

Specifically, it comprises an adenoviral gene essential for replication (ELA, ELB or EA), which is under the transcriptional control of a prostate specific transcriptional response element (TRE) and polyethylene composition as the masking agent. The present invention describes this composition as useful for suppressing tumour cell growth and for lowering the levels of tumour cell markers. It can also be used for introducing transiant expression that may be involved in treating undesirred proliferations other than tumours, such as psoriatic lesions and wound healing. In addition, it is useful for detecting cells where a cell type-specific TRE is functional in a biological sample and for treating prostate-associated diseases such as hyperplasia and cancer. As such, these compositions exhibit cytostatic, antipsoriatic and vulnerary activities. This polypeptide sequence is the human ADP protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition comprising replication competent adenovirus having adenovirus gene essential for replication under transcriptional control of cell type specific transcriptional response element and masking agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MTGSTIAPTTDYRNTTATGLTSALNLPQVHAFVNDWASLDMWWFSIALMFVCLIIMWLIC 60

The present invention relates to an adenovirus vector comprising an adenovirus early gene essential for propagation under the control of a human prostate specific antigen promoter and a human prostate specific antigen (PSA) enhancer. The invention is useful for treating a patient suffering from prostate cancer and for making mammalian hosts that are transfently transgenic and for detecting the presence of cells that permit the function of a cell type-specific transcriptional regulatory element (TRR) in a sample. The invention is also used in the gene therapy and also as vaccine. The present sequence is the adenovirus death protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

Adenovirus death protein.

```
The present sequence in the process and inducible transcriptional transactivator (TT) coding sequence under the inducible transcriptional transactivator (TT) coding sequence under the inducible transcriptional control of a cell type-specific TRE (CT-TRE); and an adamovirus gene is preferably a gene essential for ademoviral captor. The ademovirus gene is preferably a gene essential for ademoviral replication. The TT may be inhibited or activated by the inducing agent. Also claimed is an ademovirus vector comprising: an inducible TT coding sequence under transcriptional control of a second TRE, where the TT and a second gene under transcriptional control of a second gene may an ademovirus second gene under transcriptional control of a second gene may an ademovirus control of a second gene may an ademovirus gene is activated by an exogenous inducing agent. The second gene may an ademovirus gene is under transcriptional control of a second gene whole the regulated TRE and a polymorleotide encoding an ADP cuttransactivated regulated TRE and a polymorleotide encoding an ADP under control of a second transactivator regulated TRE, where the ademovirus gene is essential for replication. Also claimed are host cells comprising the replication competent ademovirus vector, and methods for propagating and regulating the vector. A claimed method and administering are inducing agent such that the ademovirus vector is propagated and competent ademovirus vector is propagated and caused lumnne response, resistance to infection, production of a crepair, enhanced immune response, resistance to infection, production of factors, enhanced immune response, resistance of infection, production of the viral for replication of metabolic or other physiological pathways, or comparison of activity of cells in the envention of a viral gene envential for replication of a viral centerial pathways or comparison of activity of cells in the envention of a viral centerial pathways or comparison of a viral centerial pathways or comparison of a viral 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

```

```
Novel isolated polynucleotide comprising nucleotide sequence of yeast cytosine deaminase/mutant SR 39 herpes simplex virus type 1 thymidine kinase fusion gene, useful for treating mammalian patient having malignancy or solid tumor.
                                                chemotherapy; cytosine deaminase; thymidine kinase; death protein;
                         Amino acid sequence of adenovirus type 5 adenovirus death protein.
                                                               cancer; neoplasm; 5-fluorocytosine; ganciclovir.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of adenovirus death protein (ADP). The invention provides replication-competent adenovirus vectors specific for target cells and methods of using such vectors. The vectors contain heterologous transcription regulatory elements (TREs) and may incorporate a gene, such as the ADP gene (see AAV53632), which can contribute to cytocoxicity in the target cell. Adenoviral replication can be restricted to target cells in which the heterologous TREs are functional and thus the vectors can provide selective cytotoxicity to the target cells (e.g. prostate, liver, breast or colon), particularly neoplastic cells
                                                                                                                                                                    Adenovirus death protein; ADP; transcription regulatory element; vector; breast cancer; prostate cancer; liver cancer; colon cancer; gene therapy.

The specification describes a polynucleotide comprising a nucleotide sequence of yeast cytosine deaminase/mutant SR39 herpes simplex virus type 1 thymidine kinase fusion gene, and further comprising an adenovirus type 1 thymidine by protein gene. The polynucleotide of the invention limits the side effects of cancer treatment by using only lower doses of radiation. The polypeptide encoded by the above polynucleotide is useful for converting 5-fluorocytosine or ganciclovir into active chemotherapeutic agents. Pharmaceutical compositions comprising recombinant adenoviruses comprising polynucleotides of the invention are tumor. The present sequence represents an adenovirus type 5 adenovirus death protein, which is used to construct polynucleotides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

## November 2005

generate two sets of results each. The Published_Applications databases have been split into two parts to Published Applications Nucleic Acid and Published Applications Amino Acid database searches now reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published Applications Main databases. Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_Main) and .rnpbn (Published_Applications_NA_New). Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_Main) and .rapbn (Published_Applications_AA_New). No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                              Sequence 17, Application US/09814351

Patent No. 6692736

GENERAL INFORMATION:
APPLICANT: Yu, De-Chao
APPLICANT: Yu, De-Chao
APPLICANT: Li, Yuanhao
APPLICANT: Li, Yuanhao
TITLE OF INVENTION: CELL-SPECIFIC ADENOVIRUS VECTORS
TITLE OF INVENTION: CELL-SPECIFIC ADENOVIRUS VECTORS
TITLE OF INVENTION: COMPRISING AN INTERNAL RIBOSOME ENTRY SITE
FILE REFERENCE: 348022001700
CURRENT APPLICATION NUMBER: 60/192,156
PRIOR PILING DATE: 2000-03-24
NUMBER OF SEQ ID NOS: 35
SOFTWARE: FASESEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 307;

| Sequence 3, Application US/09814292
| Sequence 3, Application US/09814292
| Patent No. 685258
| GENERAL INPORMATION:
| APPLICANT: Thang, Hong
| APPLICANT: Abriderson, Daniel R.
| TITLE OF INVENTION: HUMAN UROTHELIAL CELL SPECIFIC UROPLAKIN
| TITLE OF INVENTION: HEADSCRIPTIONAL REGULATORY SEQUENCES, VECTORS COMPRISING
| TITLE OF INVENTION: WROTHORN: WROTHORN SPECIFIC TRANSCRIPTIONAL REGULATORY SEQUENCES, AND
| TITLE OF INVENTION: WROTHORN: BETONG OF USE THEREOF
| TITLE OF INVENTION: WROTHORN: BETONG OF USE THEREOF
| FILE REFERENCE: 346022001500
| CURRENT APPLICATION NUMBER: 60/191,861
| PRIOR FILING DATE: 2000-03-24
| NUMBER OF SEQ ID NOS: 46
| SOFTWARE: PASESEQ for Windows Version 4.0
| SEQ ID NO 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 7, Application US/0939282A

Sequence 7, Application US/0939282A

Patent No. 6900049

GENERAL INFORMATION:
APPLICANT: Yu, De Chao
TITLE OF INVENTION: Adenovirus Vectors Containing Cell
TITLE OF INVENTION: Status-Specific Response Blements and Methods of Use Thereof
TITLE OF INVENTION: Status-Specific Response Blements and Methods of Use Thereof
TITLE REFERENCE: CELL-014; 122.1

CURRENT APPLICATION NUMBER: US/09/392,822A

CURRENT FILING DATE: 1998-09-09

PRIOR FILING DATE: 1998-09-10

PRIOR FILING DATE: 1999-09-09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 AACATCTGCCCTAAATTTACCCCAAGTTCATGCCTTTGTCAATGACTGGGCGAGCTTGGA 120

Patent No. 6911200

GENERAL INFORMATION:
APPLICANT: Turne De-Chao
TITLE OF INVENTION: METHODS OF TREATING NEOPLASIA
TITLE OF INVENTION: MITH COMBINATION TARGET CELL-SPECIFIC ADENOVIRUS,
TITLE OF INVENTION: MITH COMBINATION
TITLE OF INVENTION: MITH COMBINATION
FILE REFERENCE: 348022001600
CURRENT APPLICATION NUMBER: 05/192,015
PRIOR FILING DATE: 2001-01-15
NUMBER OF SEQ ID NOS: 35
SORTHARE: FREESEQ for Windows Version 4.0
SEQ ID NO 17
MADEL NO 17
                                                                                                                                                                                                                                                                                          1 GATGACCGGCTCAACCATCGCGCCCACAACGGACTATCGCAACACACTGCTACCGGACT

New adenovirus vectors, particularly for cancer therapy - comprising adenovirus gene under transcriptional control of carcinoembryonic antigen transcriptional regulatory element.
                                                                                                                                                                                                                                                                                  This is the coding region of the adenovirus death protein (ADP, see AAW78902). It can be obtained by PCR amplification (see also AAV52945-46). Claimed replication-competent adenovirus (Ad) vectors comprise an Ad gene under transcriptional control of a CEA-TRE. The vectors can be used to detect and monitor samples for the presence of cells that allow a CEA-TRE to function, and to selectively kill such cells, especially malignant cells. Octors containing an ADP gene may be more potent than vectors dosage requirement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AACATCTGCCCTAAATTTACCCCAAGTTCATGCCTTTGTCAATGACTGGGCGAGCTTGGA 120

                                  AW61197) of adenovirue type 2. The ADP coding sequence (with or without the Y leader) can be introduced into an adenoviral genome, e.g. in the E3 or E4 region. Inclusion of such a coding sequence in an adenoviral vector significantly enhances the extent of cytocoxicity, cell killing and virus production. The invention provides replication-competent adenovirus vectors which preferentially replicate in cells that express alphatetoprotein (AFP), particularly heptoma cells. The vectors comprise at least one adenovirus gene, preferably a gene that contributes to cytocoxicity, under the transcriptional control of an AFP transcription conferring selective cytotoxicity to AFP-expressing cells, especially cancer cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                This is the coding region of the adenovirus death protein (ADP, see AAW75787). It can be obtained by PCR amplification (see also AAV57350-51). Claimed replication-competent adenovirus (Ad) vectors comprise an Adgene under transcriptional control of a probasin transcriptional response element (PB-TRE, see AAV57334). The vector can be used for detecting calls that allow a PB-TRE to function, especially cells expressing an androgen receptor, such as prostate cells. They can be used to confer selective toxicity to such cells. In particular, the vectors can be used for treating cancers such as prostate cancer. Ad vectors can be used for treating cancers such as prostate cancer. Ad vectors can be used for treating cancers such as prostate cancer. Ad vectors can be used fective treatment and/or a lower dosage requirement. An Ad vector has been constructed that contains the ADP gene under control of PB-TRE. Cytcoxicity was demonstrated toward LNCaP (prostate carcinoma) cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AACATCTGCCCTAAATTTACCCCAAGTTCATGCCTTTGTCAATGACTGGGGCGAGCTTGGA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This polynucleotide encodes the adenovirus death protein (ADP, see AAW98003) of adenovirus serotype 2. The invention provides novel adenovirus vectors in which at least one adenovirus gene, preferably one that contributes to cytocoxicity, is placed under transcriptional control of a human glandular kallikrein hKLK2 enhancer transcriptional regulatory element (hKLK2-TRE, see AAX24755). Such vectors are useful for treatment of cancers such as prostate cancer. The ADP gene may render the adenoviral vector more potent, making possible more effective treatment and/or lower dosage regulirement. (Updated on 17-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

The specification describes adenoviral vectors which comprise an adenoviral gene under transcriptional control of a call status specific transcriptional regulatory element (TRE). The TRE is preferably one that is essential for adenovirus propagation. The adenovirus vectors may be used for the treatment of a range of tumours such as lung, stomach, breast, colon and rectum, and uterine and cervix cancers

The present sequence is that of the coding region of the adenovirus death protein. The sequence was obtained by PCR amplification and used in the construction of adenoviral vectors in which ADP expression was under the control of a urothelial cell-specific transcriptional regulatory element (TRE) derived from the human uroplakin II gene 5' flanking region (see AAI70144). This is an example of adenoviral vectors of the invention. Such vectors comprise a gene, preferably an adenovirus gene, under transcriptional control of a urothelial cell-specific cytotoxicity, and are used for the specific, targeted gene therapy of bladder cancer. (Updated on II-SEP-2003 to standardise OS field)

```
This sequence encodes adenoviral ADP. This coding sequence may be used in the replication-competent adenoviral vector (A) of the invention which contains two genes (G1, G2) that are co-transcribed as a single mRNA and under control of a heterologous, target cell-specific transcriptional regulatory element (TRE). G2 has a mutation in, or deletion of, its endogenous promoter and is controlled from an internal ribosome entry atte (IRES). The ADP coding sequence may be used as G1 or G2. (A) has greater specificity for a target cell than a similar vector in which TRE is operably linked to a gene and which lacks an IRES. (A) are used to modify the genotype of target cells, optionally in vitro with subsequent return of altered cells to the host and where G2 is a cytocoxic gene, to confer selective cytocoxicity to target cells, especially for killing cancer cells. ADP displays a cytotoxic, particularly cell lysis, function. Also (A) are used for diagnosis and monitoring, e.g. detection of bladder cancer cells. The target cell-specific TRE ensures that (A) has better targeting specificity, with minimal replication in non-target cells, so a runaway infection is prevented but production of adenoviral proteins in target cells activates and/or stimulates the immune response than two identical control elements) eliminates the risk of homologous recombination and may provide enough extra space for an additional control elements) eliminates the risk of homologous recombination and may provide enough extra space for an additional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 AACATCTGCCCTAAATTTACCCCCAAGTTCATGCCTTTGTCAATGACTGGGCGAGCTTGGA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241 ACACAATGAAAAAATTCATAGATTGGACGGTCTGAAACCATGTTCTCTTTTTACAGTA 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACACAATGAAAAATTCATAGATTGGACGGTCTGAAACCATGTTCTTCTTTTACAGTA 300
                                                                                                                                                                                                                                                                                       The invention relates to an adenovirus vector (AV) comprising an AV gene under transcriptional control of a cell type-specific transcriptional regulatory element (TRE) and optionally a first AV gene under control of a first cell type-specific TRE and a second gene under control of second cell type-specific TRE, where the first and second cell type-specific TRE, where the first and second cell type-specific TRE, where the first and second cell type-specific TREs are substantially identical. When the vector is introduced into a cell (e.g. prostate cell, liver cell, breast cancer cell) it allows the cell type-specific TRE to function, resulting in cycotoxicity. The vector is useful for suppressing tumour growth of a target cell. This sequence represents a polynucleotide used in the scope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                  Novel adenovirus vector comprises adenovirus gene under transcriptional control of cell-type specific transcriptional response element for conferring selective toxicity on target cell and for suppressing tumor

The present invention relates to adenoviral vectors comprising an adenovirus gene under transcriptional control of a cell type-specific transcriptional response element (TRE). Example TRES given in the specification include human prostate-specific antigen (BSA) TRE, human glandular kallikrein (hKLK) TRE, rat probastin (PB) TRE, human carcinoembryonic antigen (CEA) TRE, and human mucin-like glycoprotein DF3 (MUC1) TRE. The modified adenovirus vector is useful as a vehicle for introducing new genetic capability, particularly associated with cytocoxicity for treating neoplasia. For example, the vector may be used in a target cell to suppress tumour growth, or to kill the target cell. The vector is particularly useful in gene therapy. The present sequence encodes adenovirus death protein (ADP). (Updated on 27-OCT-2003 to

proliferations other than tumours, such as psoriatic lesions and wound healing. In addition, it is useful for detecting cells where a cell type specific TRE is functional in a blological sample and for treating prostate-associated diseases such as hyperplasts and cancer. As such, these compositions exhibit cytostatic, antipsoriatic and vulnerary activities. This polynucleotide sequence is the human mucin (MUC1) TRE DNA sequence of the invention. NOTE: This sequence is identical to that given as SeqID 10.
                                                                                                                                                                                                                                                                                                                                                                                    121 CATGTGGTGGTTTTCCATAGCGCTTATGTTTGTTTGCCTTATTATTATGTGGCTTATTTG

Specifically, it comprises an adenoviral gene essential for replication (ElA, ElB or E4), which is under the transcriptional control of a prostate specific transcriptional response element (TRE) and polyethylene glycol (PEG) as the masking agent. The present invention describes this composition as useful for suppressing tunnour cell growth and for lowering the levels of tunnour cell markers. It can also be used for introducing transient expression that may be involved in treating undesired
                                                                 240

```
This invention relates to a novel composition that contains a replication competent adenovirus capable of transfecting target host cells.

Specifically, it comprises an adenovirual gene essential for replication (EIA, EIB or EA), which is under the transcriptional control of a prostate specific transcriptional response element (TRE) and polyethylene glycol (PEG) as the masking agent. The present invention describes this composition as useful for suppressing tumour cell growth and for lowering the levels of tumour cell markers. It can also be used for introducing transferations other than tumours, such as positic lestons and wound healing. In addition, it is useful for detecting cells where a cell typespecific TRE is functional in a biological sample and for treating prostate-associated diseases such as hyperplasia and cancer. As such, these compositions exhibit cytostatic, antiposoriatic and vulnerary activities. This polymucleotide sequence is the DNA encoding the human and protein of the invention. NOTE: This sequence is identical to that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Composition comprising replication competent adenovirus having adenovirus gene essential for replication under transcriptional control of cell type specific transcriptional response element and masking agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 AACATCTGCCCTAAATTTACCCCAAGTTCATGCCTTTGTCAATGACTGGGCGAGCTTGGA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to an adenovirus vector comprising an adenovirus early gene essential for propagation under the control of a human prostate specific antigen promoter and a human prostate specific antigen promoter and a human prostate specific antigen (PSA) enhancer. The invention is useful for treating a patient suffering from prostate cancer and for making mammalian hosts that are transiently transgenic and for detecting the presence of cells that permit the function of a cell type-specific transcriptional regulatory element (TRE) in a sample. The invention is also used in the gene therapy and also as vaccine. The present sequence is the human mucin like glycoprotein DF3 (MUC1)TRE DAA. This sequence is used to construct replication competent prostate-specific attenuated adenoviruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to an adenovirus vector comprising an adenovirus early gene essential for propagation under the control of a Muman prostate specific antigen promoter and a human prostate specific antigen promoter and a human prostate specific antigen (PSA) enhancer. The invention is useful for treating a patient suffering from prostate cancer and for making mammalian hosts that are transiently transgenic and for detecting the presence of cells that permit the function of a cell type-specific transcriptional regulatory element (TRE) in a sample. The invention is also used in the gene therapy and also as vaccine. The present sequence is the adenovirus death protein

TT, where the TT is functionally responsive to an exogenous inducer agent. The adenovirus gene is preferably a gene essential for adenoviral replication. The TT may be inhibited or activated by the inducing agent. Also claimed is an adenovirus vector comprising: an inducible TT coding sequence under the transcriptional control of a CT-TRE; and an adenovirus gene under transcriptional control of a RE regulated by the TT and a second gene under transcriptional control of a gecond gene may an adenovirus for a sectivated by an exogenous inducing agent. The second gene may an adenovirus fone embodiment of the invention provides adenovirus control of a sectivated by an adenovirus gene is under transcriptional control of a first transactivated regulated TRE and a polymucleotide encoding an ADP conders of a second transactivator regulated TRE, where the adenovirus gene is essential for replication. Also claimed are host cells comprising the replication competent adenovirus vector, and methods for propagating and regulating the vector. A claimed method for selective cytolysis of a target tumor cell line involves introducing the adenovirus coetor into a call which allows the CT-TRE to function, and administering an inducing agent such that the adenovirus vector can also be used to treat psoriatic lesions, resistance to infection, propagated and requising investigation of metabolic or other physical parhabove.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               physiological pathways, or comparison of activity of cells in the presence and absence of the virus introduced transgene. In vectors of the invention, expression of a viral gene essential for replication is regulated both by the CT-TRE and the transactivator regulated TRE, and
control of a TRE regulated by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          indirectly by the concentration of the inducing agent

The specification describes a polynucleotide comprising a nucleotide sequence of yeast cytosine deaminase/mutant SR39 herpes simplex virus type 1 thymidine kinase fusion gene, and further comprising an adenovirus type 5 adenovirus death protein gene. The polynucleotide of the invention limits the side effects of cancer treatment by using only lower doses of radiation. The polypeptide encoded by the above polynucleotide is useful for converting 5-fluorocytosine or ganciclovir into active chemotherapeutic agents. Pharmaceutical compositions comprising useful for treating a mammalian patient having a malignancy or solid tumor. The present sequence represents a partial sequence (the E3 region) Novel isolated polynucleotide comprising nucleotide sequence of yeast cytosine deaminase/mutant SR 39 herpes simplex virus type 1 thymidine kinase fusion gene, useful for treating mammalian patient having malignancy or solid tumor. polynucleotide of the olnant adenovirus comprising the polynucleotid The recombinant adenovirus is designated Ad5ganciclovir; Ad5-yCD/mutTK(SR39)rep-ADP; 88. Barton K, Paielli D; Example; SEQ ID NO 3; 62pp; English. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
